your garden, gardening
& landscape gardening

GaLaDEKO STIXX

GaLa-DEKO-STIXX are natural and high-quality auxiliary supplies for your soil. The Gala-Deko-Stixx's are mineralised and coloured wood chips, to mulch outside areas for the long run as well as for decoration purposes.

Through the careful wood chips screening process we achieve a homogeneous grain texture which guarantees a smooth outer shape. Next to the common advantages of mulch products the **GaLa-DEKO-STIXX** offer a variety of colours which allow you to be as creative as possible, whether you are a professional craftsman or an ambitious gardener. In comparison to common products the **GaLa-DEKO-STIXX** are very long lasting and exceptionally weather and fungus resistant due to the new manufacturing process.

Raw material

natural coniferous wood chips, which are a side product of the saw mill industry

Handling

Through the transformation of the wood chips cell structure an adhesive surface can be created. Afterwards these wood chips get covered with mineralised additives and hydraulic binding material. By adding different colour pigments, not only various colours but moreover colour intensity that isn't changing or loosing colour, can be achieved.

Advantages

- Storable (bags)
- Weather-resistant over a long period of time
- Cost savings – mulching again isn't necessary
- Blocks fungus and rot
- High flexibility and creativity in terms of colour (6 colour variations)
- Prevents soil erosion
- Water-saving
- Protects the plant roots
- Weed restraining
- Ecological and recyclable

Field of application

- Garden bed
- Parks and pathways
- Enclosure of trees and bushes
- Plant containers
- Decoration (indoor and outdoor areas)

Packaging

- 50 Litre units
(enough for an area of approx. 1 m²)*
- BigBag /ca. 850-1000 Litre
(enough for an area of approx. 17-20 m²)*

** A filling of approx. 5 cm in height*

GaLa DEKO STIXX
